

At Barlow Respiratory Hospital, we are proud of our long-standing commitment to quality care. We focus on serving medically complex patients who are dependent on a ventilator to breathe.

Quality Care for Medically Complex Patients

Barlow Respiratory Hospital is an accredited, licensed 105 bed long-term acute care hospital (LTACH) with locations in Los Angeles, Van Nuys and Whittier, California.

We accept Medicare, Medi-Cal, private insurance. On-site physician 24 hours a day, 7 days a week.

Our successful outcomes are made possible by our deeply dedicated and highly skilled hospital staff. Our expert teams of board certified doctors, registered nurses and licensed therapists make a positive difference in the lives of our patients and their families.

BRAIN INJURY RECOVERY

Barlow Respiratory Hospital Brain Injury Program serves patients who have sudden onset neurological events such as traumatic brain injury or stroke with a focus on comprehensive post-ICU acute care delivered by an expert interdisciplinary clinical healthcare team.

Barlow Respiratory Hospital is the destination of choice for post-ICU care. Doctors from the finest hospitals in Southern California trust their most medically complex patients to Barlow.

Brain Injury Recovery Begins Here

Barlow Respiratory Hospital serves brain injury patients with expert post-ICU care. Because acute rehabilitation facilities generally do not accept patients on a ventilator, brain injury patients who are not yet weaned from the ventilator or not yet ready for intensive rehabilitation can benefit from treatment and time to recover.

Barlow Respiratory Hospital

- Receives brain injury patients from the entire Southern and Central California region
- Ideal for brain injury patients with complex post-discharge needs to prepare for further rehabilitation at a specialized program or acute rehab facility.
- Patients are seen by multiple physicians on a regular basis.
- **interdisciplinary team includes physicians specializing in:**
 - Critical Care Medicine
 - Internal Medicine
 - Neurology
 - Psychiatry
 - Pulmonology
 - Nephrology
 - Cardiology
 - Infectious Disease
- **and skilled healthcare professionals in:**
 - Nursing
 - Wound Care
 - Respiratory Therapy
 - Physical Therapy
 - Occupational Therapy
 - Speech Therapy
 - Nutrition
 - Case Management
 - Social Services

BRAIN INJURY RECOVERY

Shantanu Thakur, MD, FAAPMR
Director, Brain Injury Program
Barlow Respiratory Hospital

Barlow Respiratory Hospital is the only non-profit long-term acute care hospital (LTACH) in Los Angeles.

We focus on serving medically complex patients with multiple medical problems, with a focus on chronically critically ill patients dependent on a ventilator to take their next breath.

Patients are transferred to Barlow Respiratory Hospital from an intensive or critical care unit when they need a longer acute hospital stay to improve and progress to the next level of care or return home.

Founded in 1902, we have a history of quality respiratory care.

BRAIN INJURY RECOVERY

Brain injuries can be devastating. Long term impacts can range from permanent disability to full recovery and depend not only on the severity of injury but on access to appropriate care. Complications of brain injury can include paralysis, spasticity, agitation, imbalances of hormones and problems with learning and remembering. Barlow Respiratory Hospital physicians and nurses are trained to recognize and treat these complications.

Barlow Respiratory Hospital is a long-term acute care hospital (LTACH) that serves chronically critically ill patients including patients who have suffered a traumatic brain injury or sudden onset neurological event, like a stroke or aneurysm, with comprehensive post-ICU care delivered by an expert interdisciplinary clinical healthcare team.

Because few rehabilitation hospitals accept patients on a ventilator, brain injury patients benefit from our specialization in ventilator weaning as an important step towards rehabilitation readiness. Brain injury patients with complex medical needs can benefit from Barlow Respiratory Hospital expert treatment to prepare for a less-intensive level of care, or an appropriate brain injury rehabilitation program.

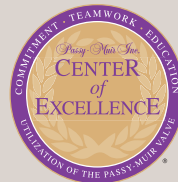

Barlow Respiratory Hospital Brain Injury Recovery Program is led by Dr. Shantanu Thakur, MD, FAAPMR. Dr. Thakur is Board Certified in Physical Medicine and Rehabilitation, Brain Injury Medicine and Pain Medicine. He has served as Clinical Assistant Professor at University of Arizona College of Medicine - Phoenix.

Our teams work together to ensure brain injury patients are rehabilitation ready and prepared for the next steps in their recovery journey.
